Summary

With three years of hands-on experience in SAP development, I have developed my skills across various SAP products and technologies. My journey began with a project for a global beverage giant, where I was part of development team responsible for migrating the client system for SAP S4 Hana. I was responsible for creating customized UI5 applications, leveraging frameworks such as UI5, JavaScript, Node.js.

Building on this foundation, I transitioned to the energy sector, taking on the challenge as the sole front-end developer. Here, I led the adaptation of a standard SAP application to meet the client's unique requirements. In my most recent role, I expanded my expertise to become a full-stack SAP developer.

Throughout my career, I have been driven by a passion for solving complex challenges and delivering high-quality, scalable solutions that align with business objectives. I am eager to continue growing and contributing to innovative SAP projects.

Work Experience

Business Architecture Analyst

| Accenture | February 2023 – Present day

- SAP UI5 Developer - Develop Ui5 FreeStyle custom applications, extend Fiori apps, system configuration, and deal with the costumers.
